

Response distribution — SimpleMC

Response distribution — TriviaMC

Per-(model, dataset) distribution over the model's raw meta responses. Under the single-shot ABCDT design the bars are A/B/C/D (answer with that letter) and T (delegate). Under the legacy digit design the bars are 1 and 2. Flat distributions $\approx$ bias-free; any letter at 85%+ means the model has collapsed onto a single output.
 Prompts — base: 1-10 scale, anchors only | instruct: 1-10 scale, anchors only | finetuned: 1-10 scale, anchors only
